Lunar Surface: Pin-point Landing and South Pole Exploration

Smart Lander for Investigating Moon (SLIM)

- Launch: on Sept. 7, 2023
- Moon Landing: Jan. 20, 2024

■ Pinpoint Landed !!

Landed 55m East from Targeted Site

■ Survived 3 Lunar Nights !!

■ Observation of Lunar Rocks with Multi-Band Camera

©JAXA/TOMY/Sony Group Corporation/Doshisha University

Lunar Polar Exploration (LUPEX)

- Target Launch: 2025-2026

In-situ Observation of Water in South Pole

Habitation Functions

ECLSS for I-HAB

- Environment Control and Life Support Capability in I-HAB
- Batteries for HALO

Logistics Module

HTV-X (HTV-XG)

- Logistic Resupply capability
- 4,000kg of pressurized cargo to Gateway within 30 days

Lunar Comm & Nav (CPNT) system

Small Lander

Medium Cargo Lander

The Pressurized Rover

- Expected to take key role in Artemis missions - Launch target: 2031

- World first mobility system on the Moon boarded without EVA suit.
- Expands the exploration range on lunar surface
- Provides both crewed/uncrewed operation modes

Signing of IA
(MEXT-NASA)
April 2024

- ✓ Provision of a Pressurized Rover by Japan
- ✓ 2 opportunities for Japanese astronauts on the Moon's surface for exploration missions.

**LNSS:
Lunar Navigation
Satellite System**

- : Payload for Navigation
 - : Payload for Optical communications
 - : Payload for RF communications
-
- : Navigation Signal
 - ↔ : Optical Communication
 - ↔ : RF Communication

Among eight LNSS satellites, four satellites are carrying optical and RF comm payloads

Earth station

GEO satellite

Moon

Activity area

$$(a, e, i, \omega) = (6,143\text{km}, 0.6, 56.2, 90)$$

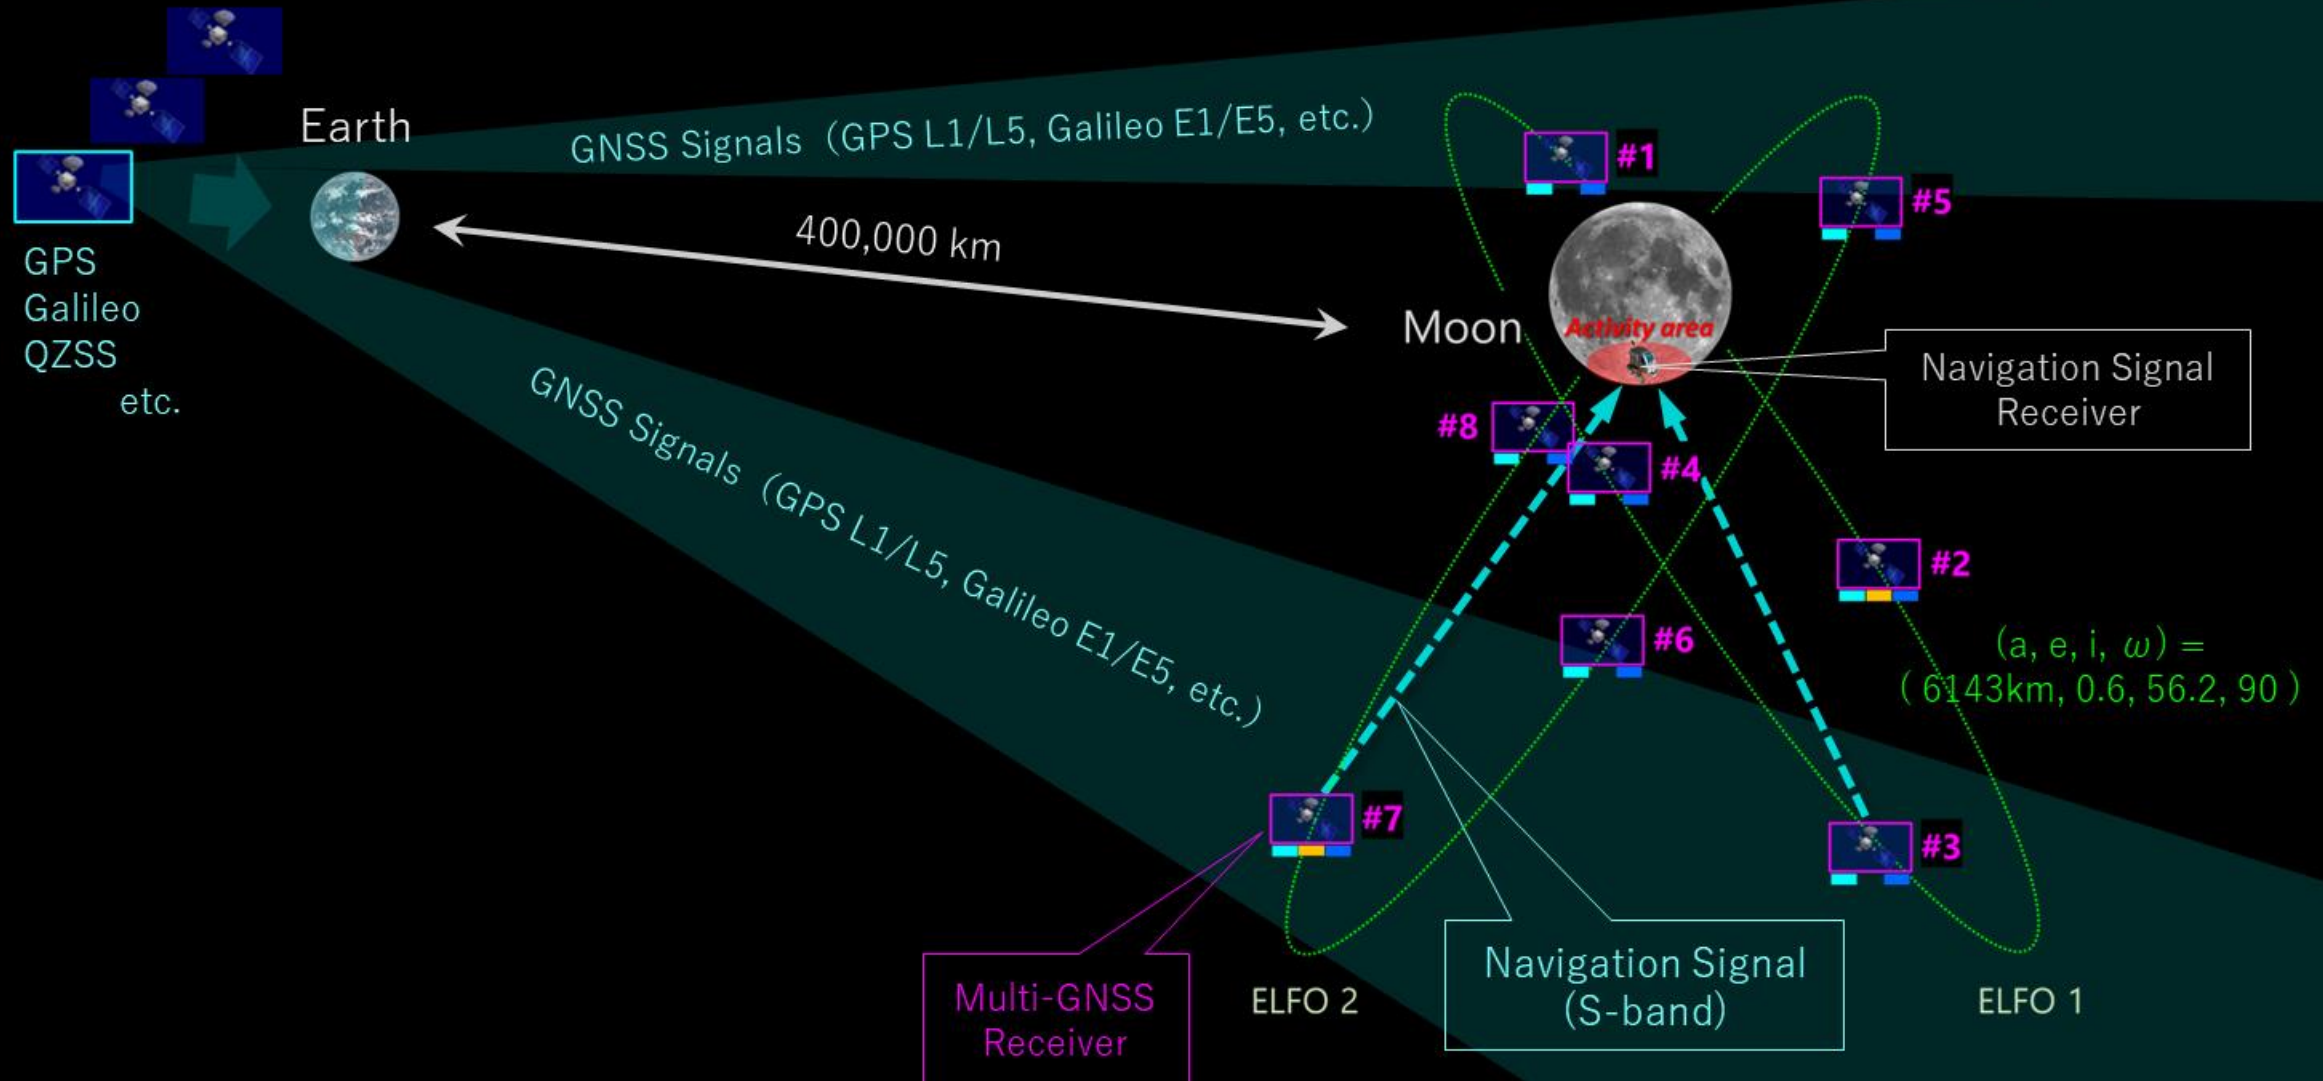

**Target:
South Pole
region**

**LNSS satellite
broadcasting one-
way navigation
signal**

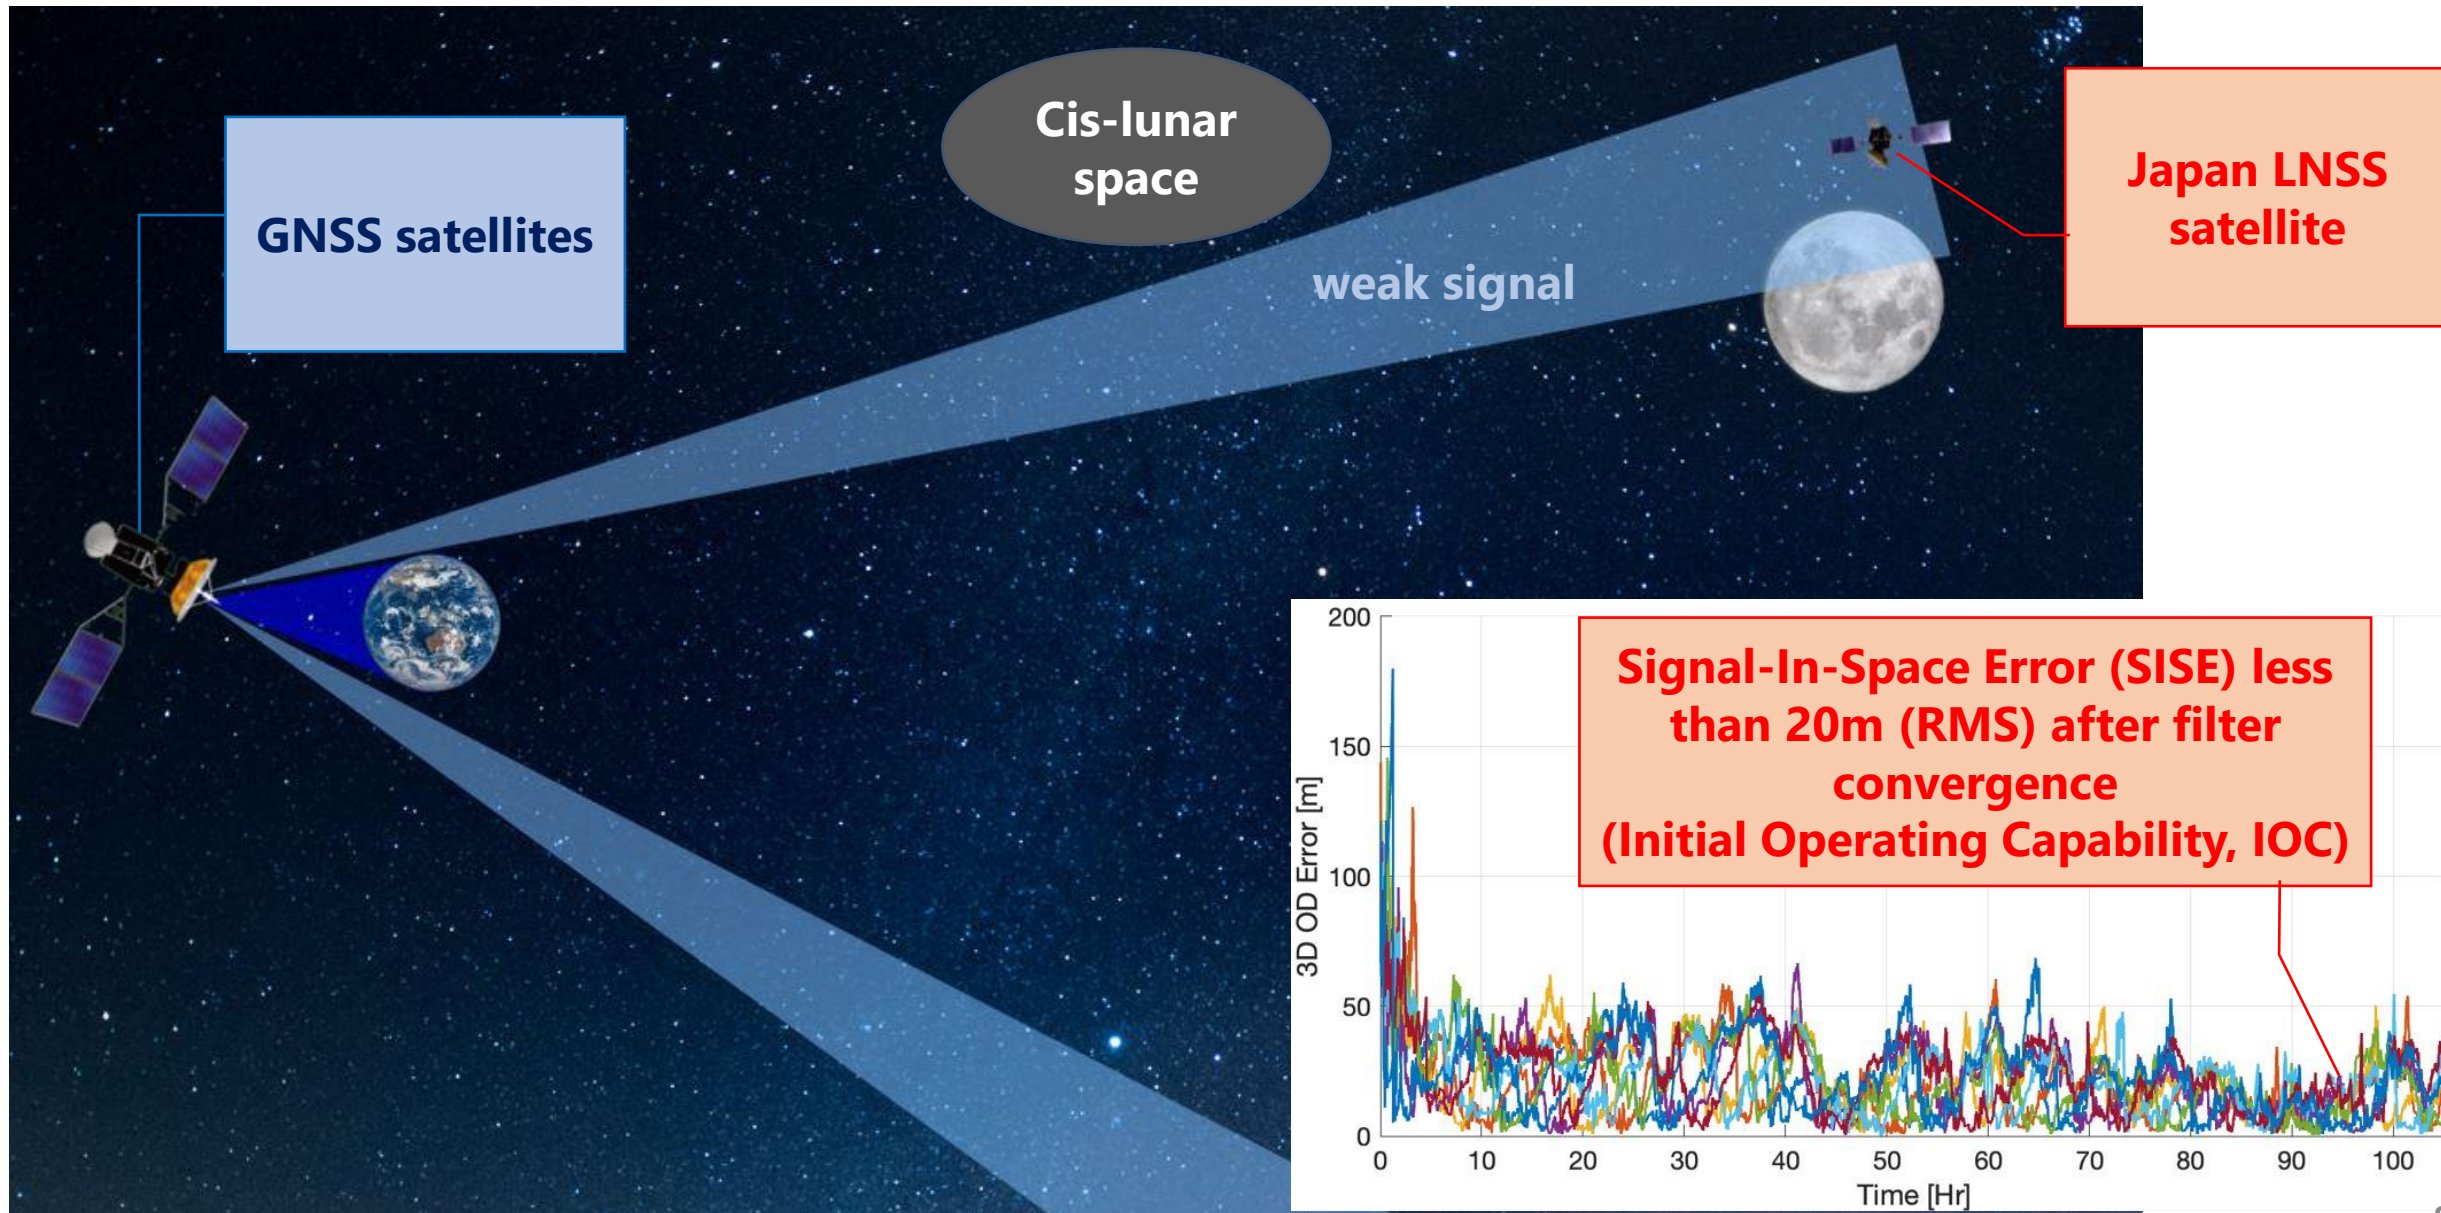

**LNSS satellite also
functioning as a data relay
satellite to the earth**

ELFO 2

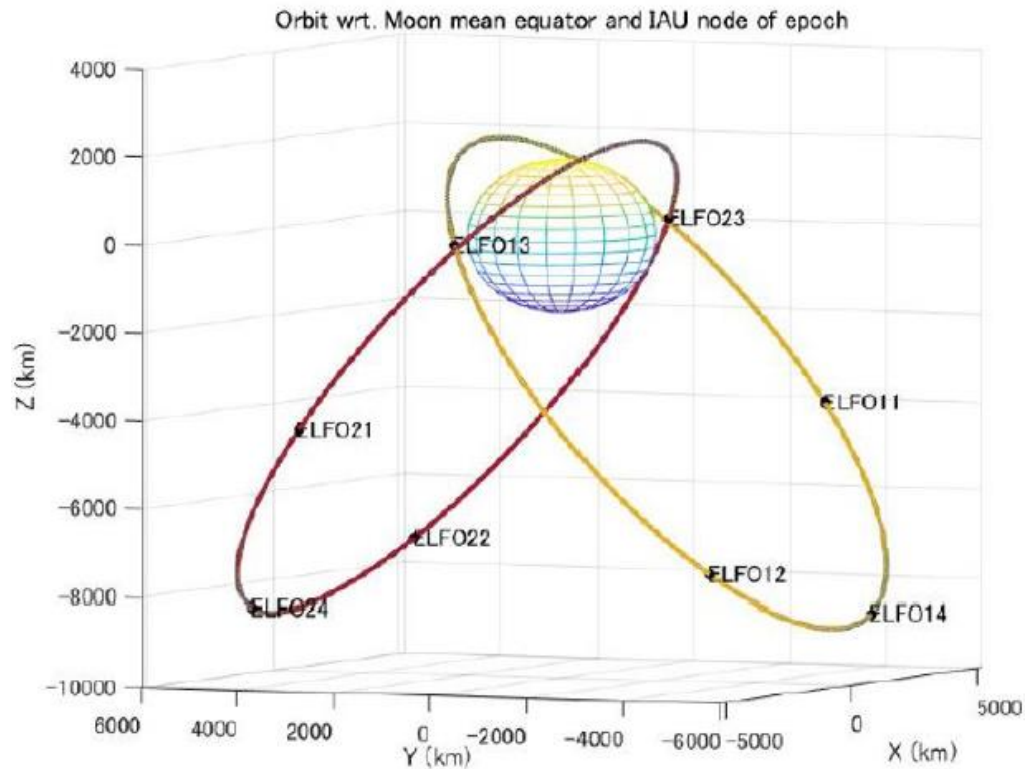

ELFO 1

GNSS weak signal navigation for LNSS satellites, making the lunar PNT autonomous

GNSS weak signals drive our LNSS, 20m SISE (RMS) at IOC, 10m SISE (RMS) at FOC

Typical LNSS PNT accuracy for a moving object (receiver) at the South Pole region

Assumed the circular movement with velocity of 3 m/s at south altitude of 85 degrees

The onboard filter (EKF) processing the LNSS measurements showed the following performance:

LNSS orbital elements in earth orbit plane frame (Ely, 2005)

SV	A[km]	E	I[deg]	RAAN[deg]	AP[deg]	MA[deg]
ELFO11	6540	0.6	56.2	0	90	0
ELFO12	6540	0.6	56.2	0	90	180
ELFO13	6540	0.6	56.2	0	90	90
ELFO14	6540	0.6	56.2	0	90	270
ELFO21	6540	0.6	56.2	180	90	0
ELFO22	6540	0.6	56.2	180	90	180
ELFO23	6540	0.6	56.2	180	90	90
ELFO24	6540	0.6	56.2	180	90	270

Collaboration with NASA and ESA for LunaNet

Lunar Comm & Nav (CPNT) systems by US, Europe, Japan

**ESA Moonlight
LCNS
(2028~)**

Contractor:
Telespazio

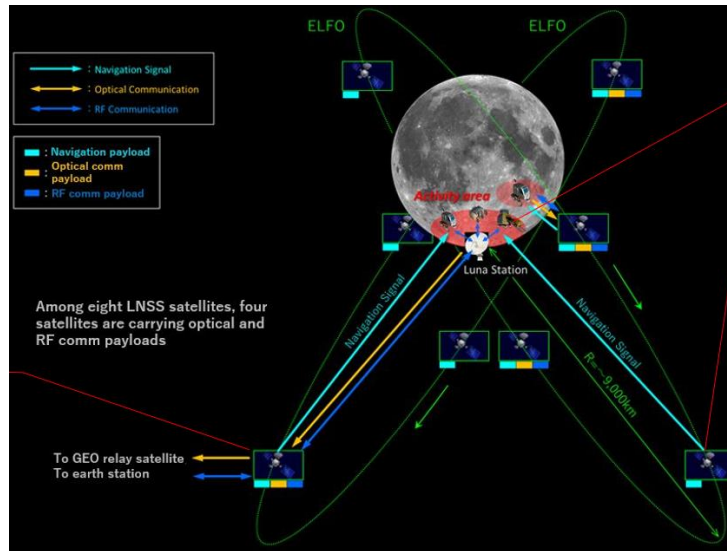

**NASA LCRNS
(2026~)**

Contractor:

LunaNet Overview

This slide available at Space For Inspiration (2024) HP
<https://bsgn.esa.int/space-for-inspiration-5th-edition-from-4-5-december-2024-in-luxembourg/>

- Set of cooperating networks
- Providing interoperable communication and navigation services
- Based on a framework of mutally agreed-upon standards
- Enabling interoperability.

Service
Oriented

LunaNet: Lunar CPNT International Framework

Ensuring interoperability among
lunar CPNT systems from the get-go

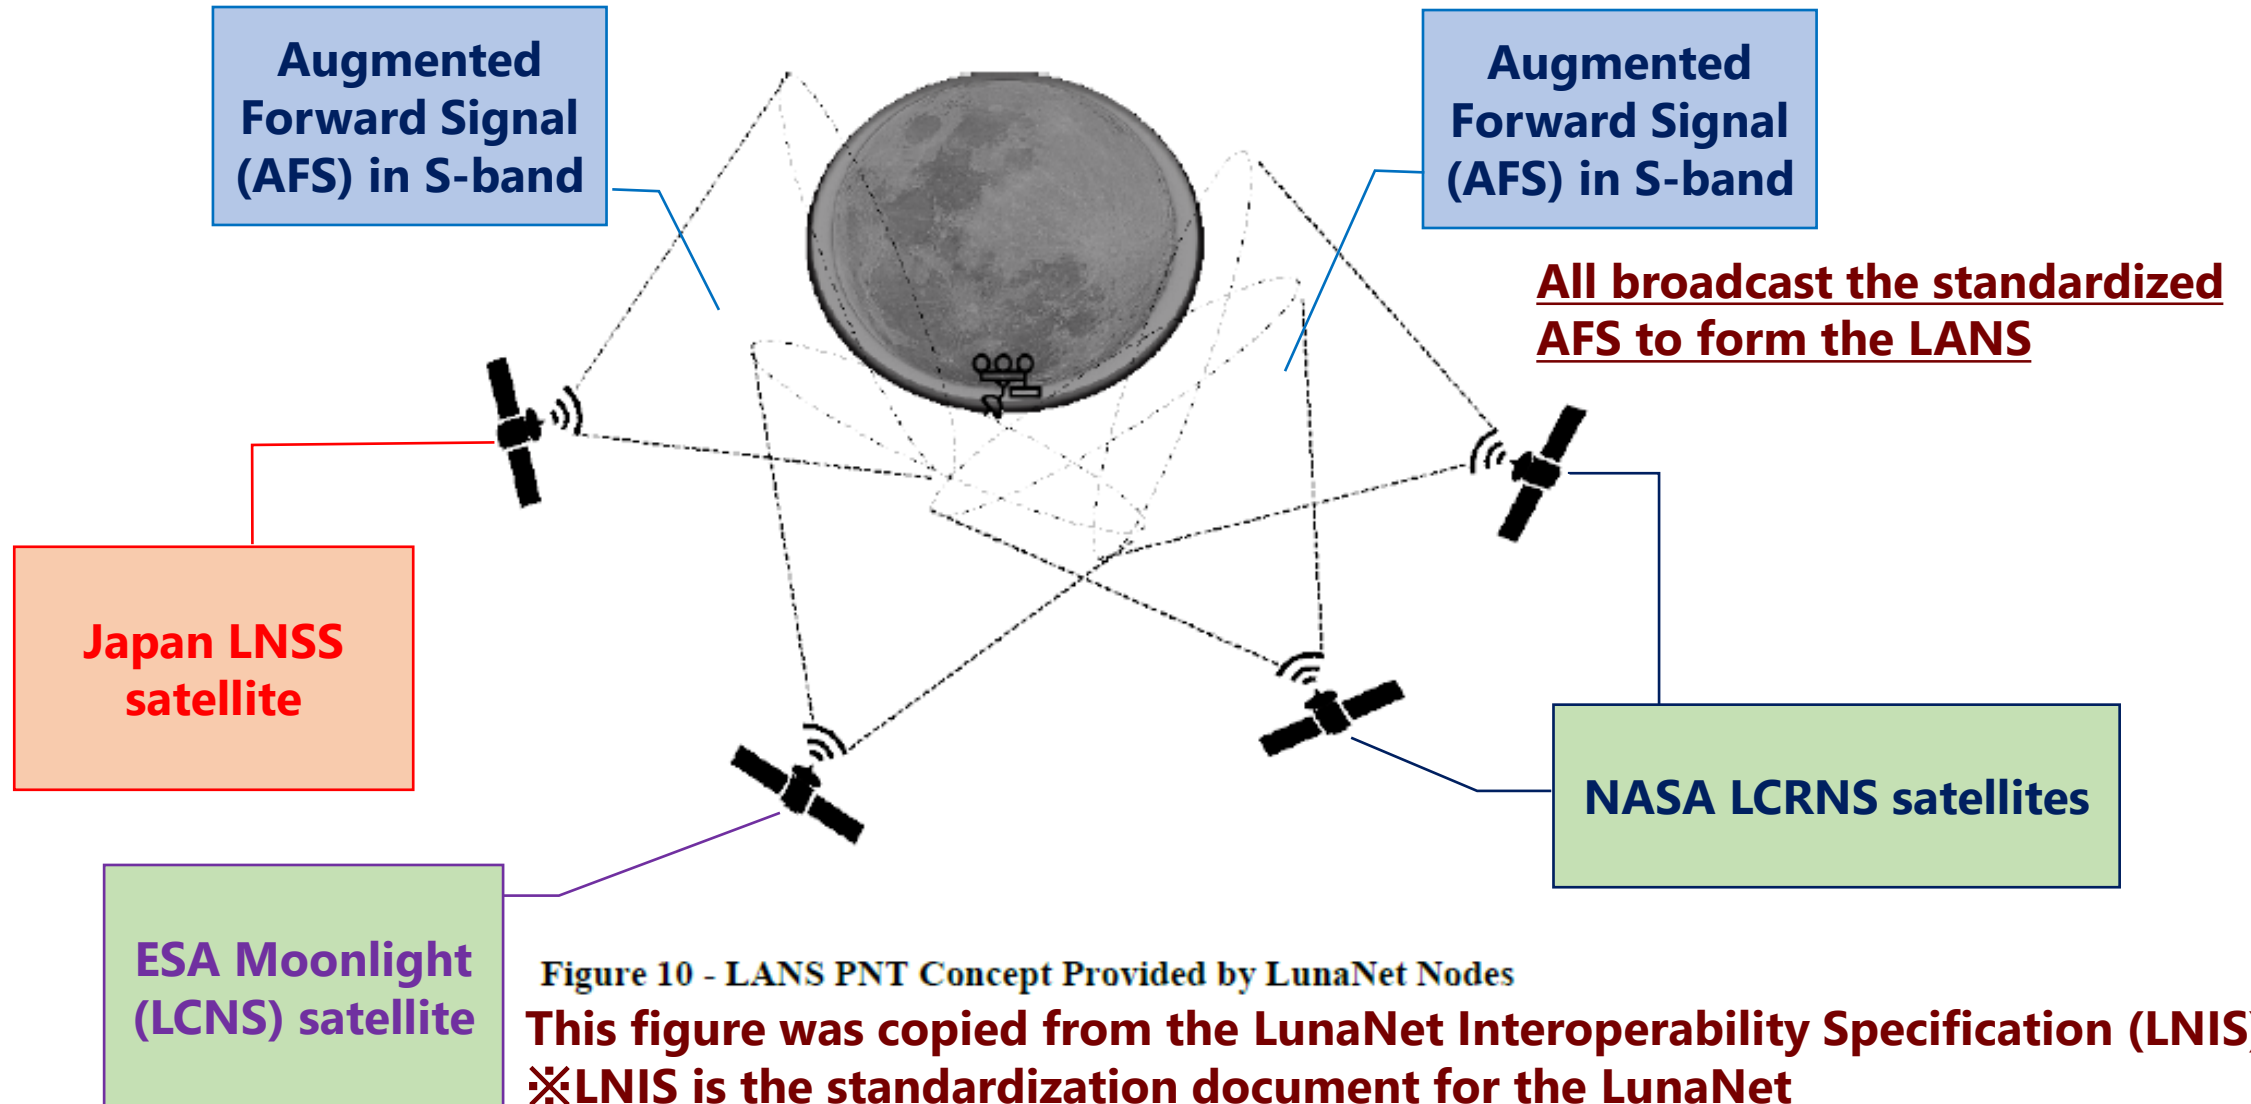

Joint establishment of
"moon GNSS" called LANS

LunaNet: Bringing terrestrial internet capabilities to astronauts, rovers, and orbiters.

NASA / Reese Patillo

Towards the establishment of 'Moon GNSS' called LANS

**The concept of interoperable lunar PNT system of systems
(Lunar Augmented Navigation Service (LANS))**

LunaNet Interoperability Specification (LNIS) Version 5 now available on the internet

LunaNet Interoperability Specification Document

Version 5

Published by NASA-ESA-JAXA

29 January 2025

LNIS V005

29 January 2025

1

The LNIS and its applicable document includes:

- Concept of the LANS, message format of the Augmented Forward Signal (AFS), signal frequency, power, etc.
- Signal-In-Space-Error (SISE) requirement for LunaNet Service Providers (LNSPs)
- Lunar Reference System and Lunar Time System Standard

The Japan LNSS complies with the LNIS to become interoperable and comparable with the other LNSPs

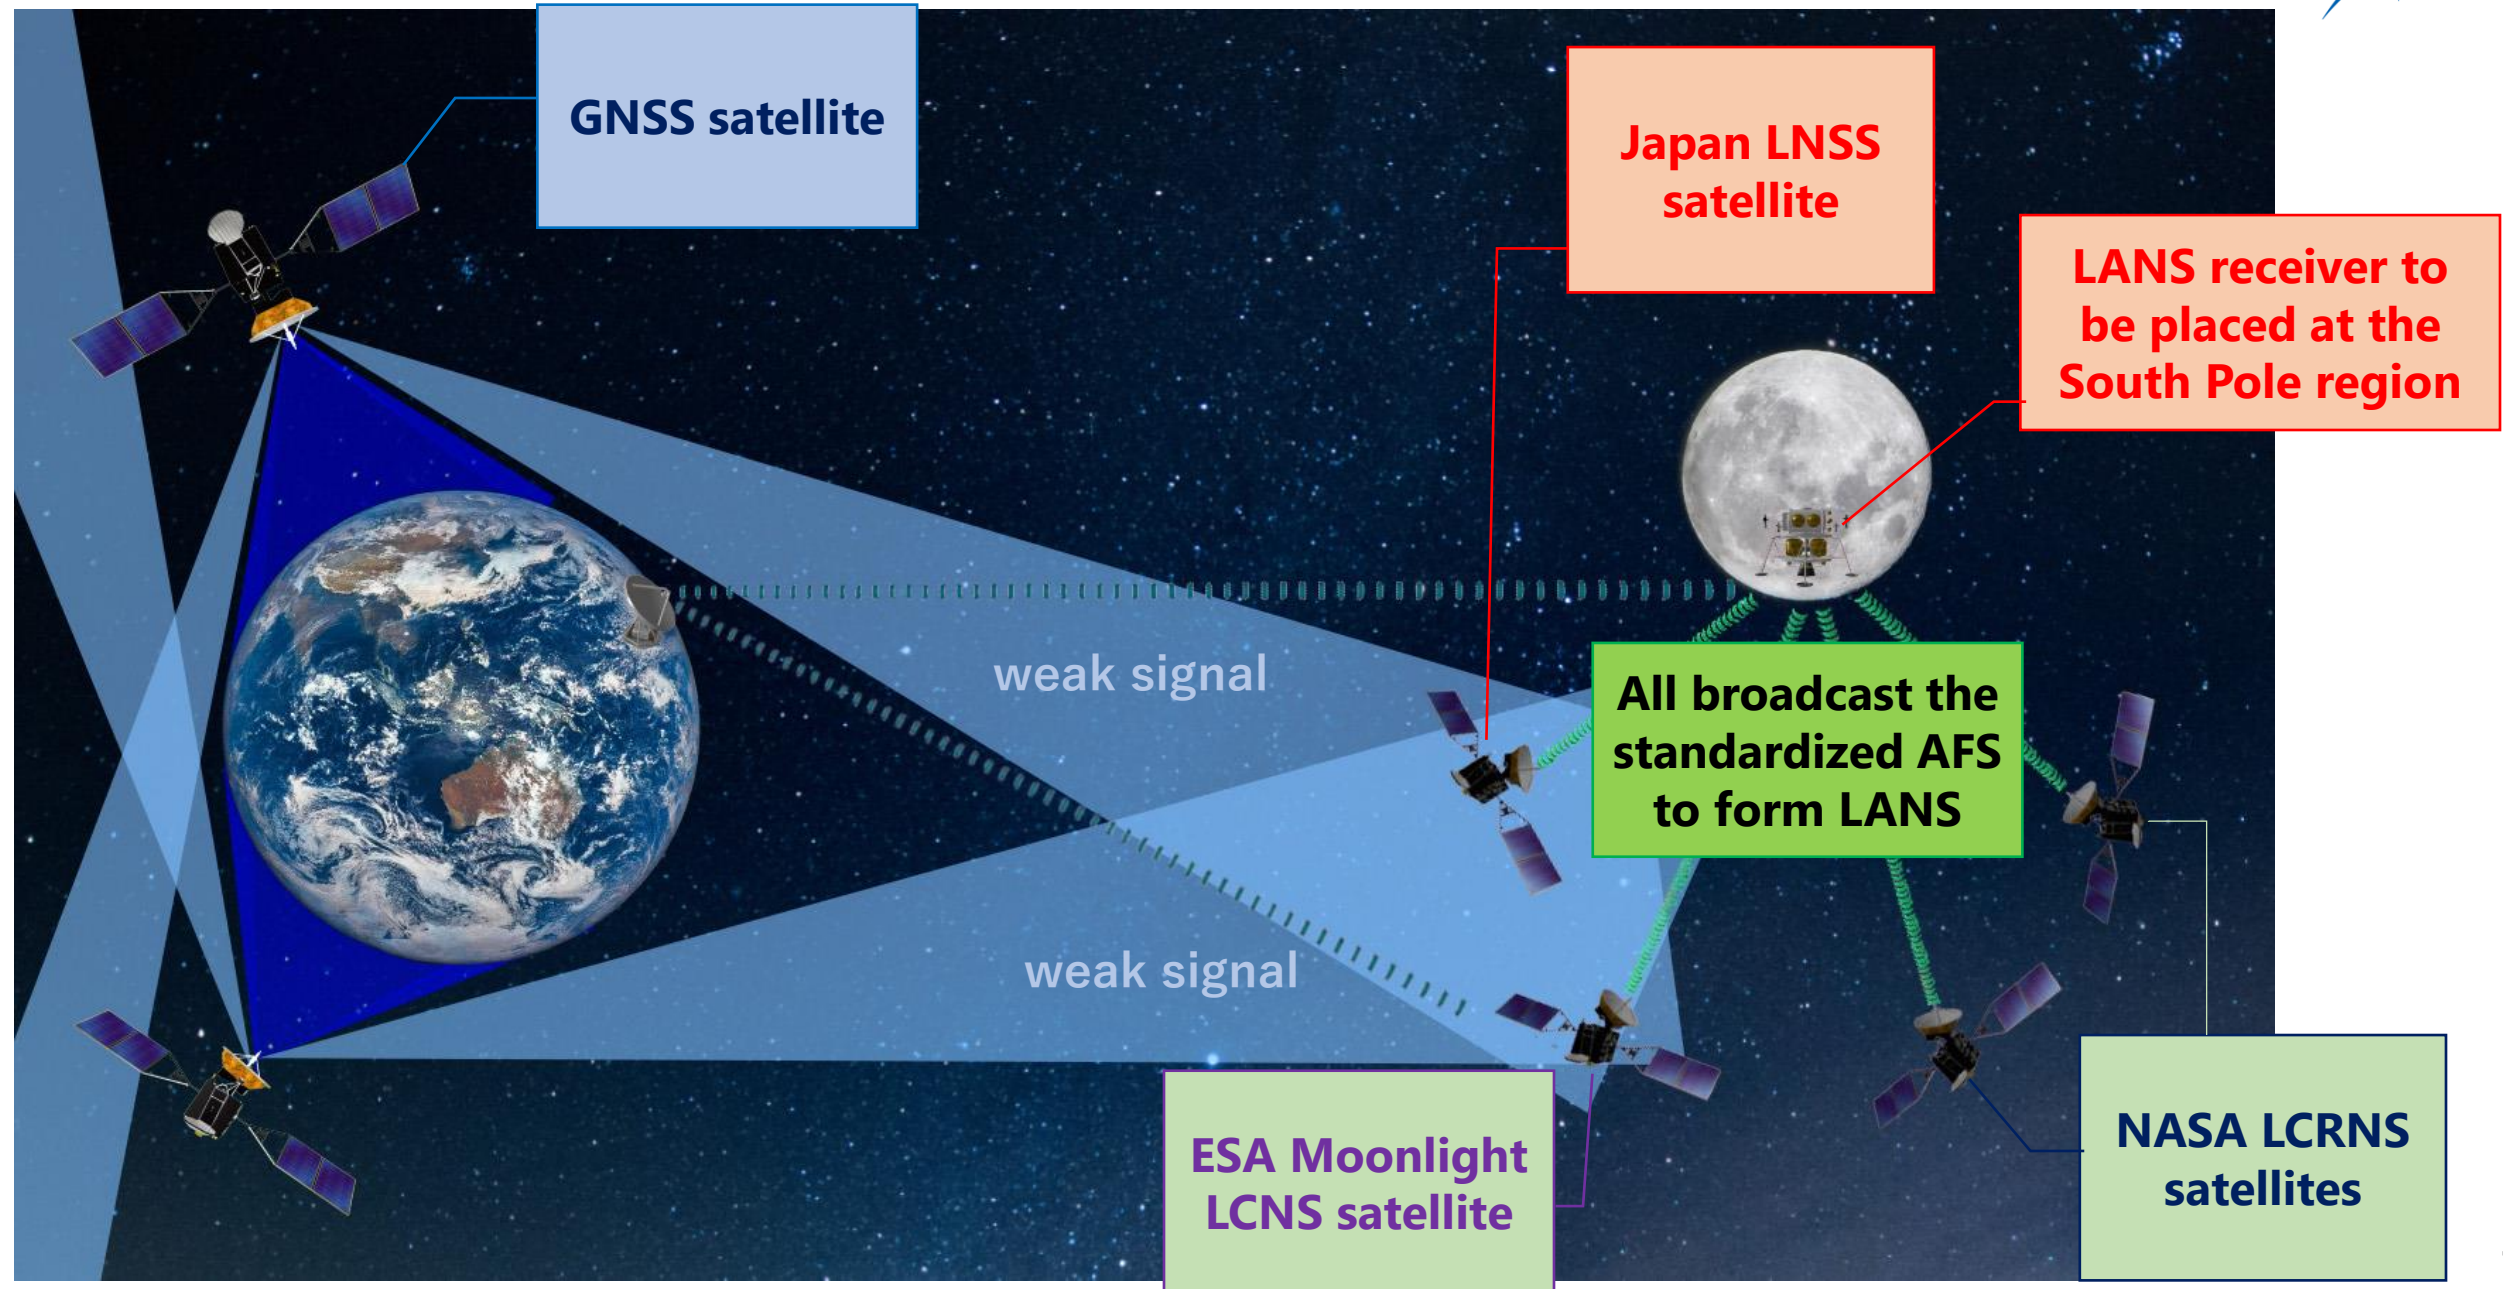

Together with NASA and ESA, JAXA continues contributing to the development of the future LNIS documents and the success of the LANS concept

Towards LANS interoperability demonstration mission targeting in 2029

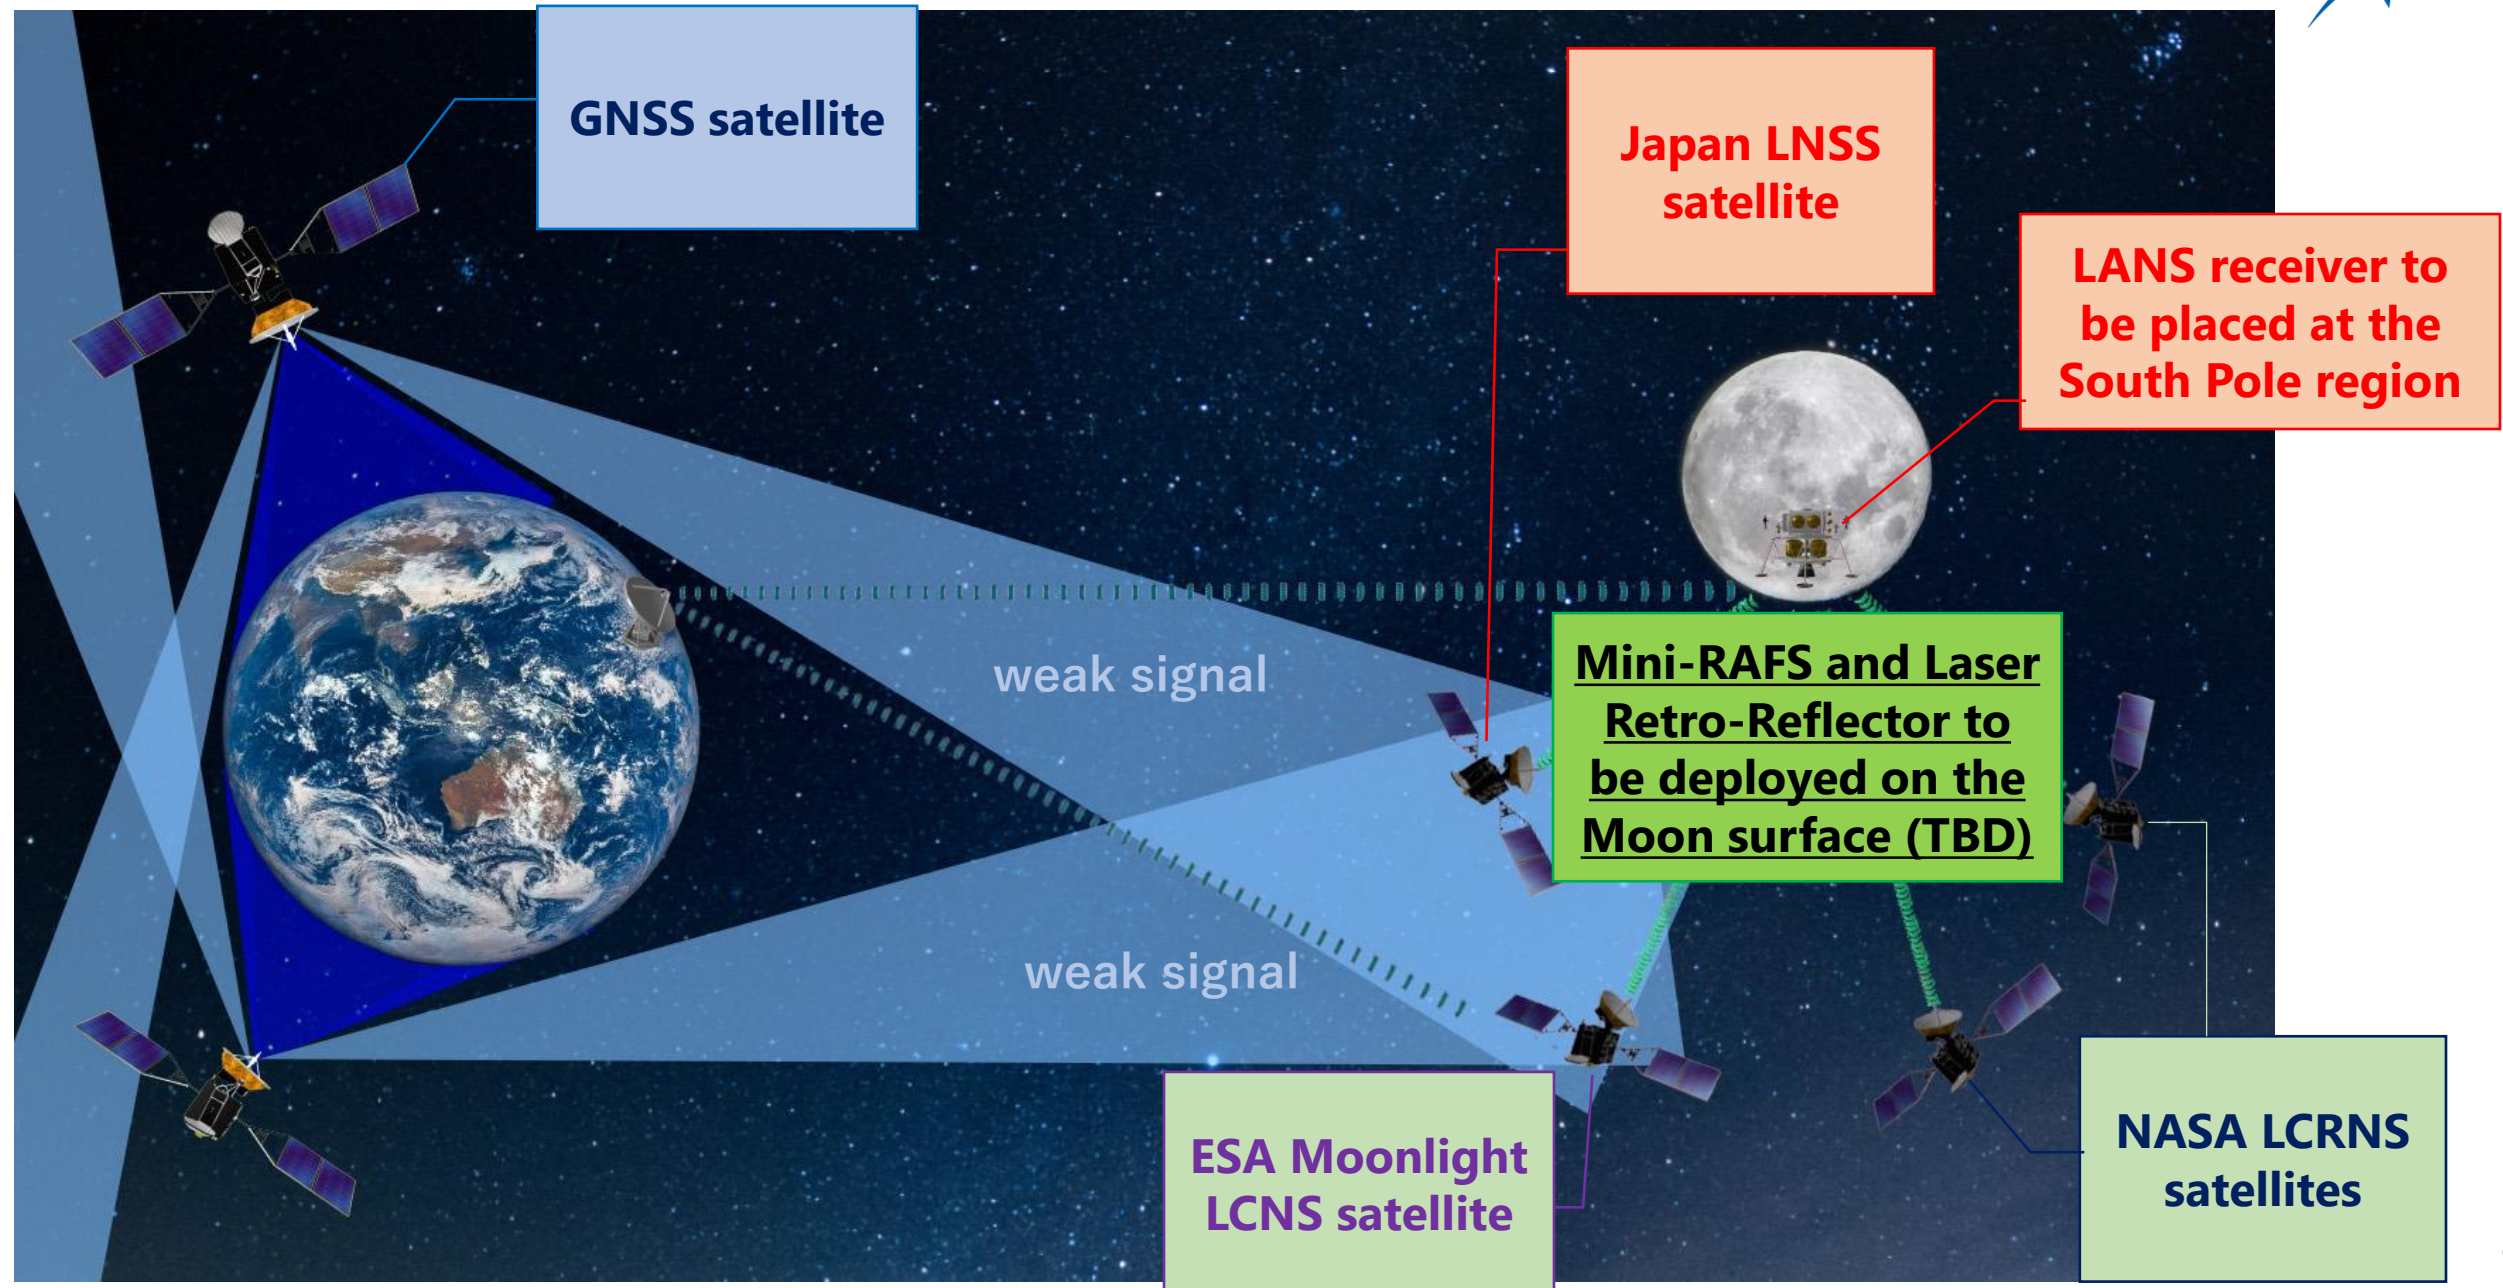

JAXA is proposing the first-ever ESA-NASA-JAXA LANS interoperability demonstration

LANSS receiver to be placed at the South Pole region will receive all broadcasted AFSs

The SISEs for satellites forming the LANS and LANS PNT accuracy will be evaluated

Mission data acquisition and ground-truth data calculation

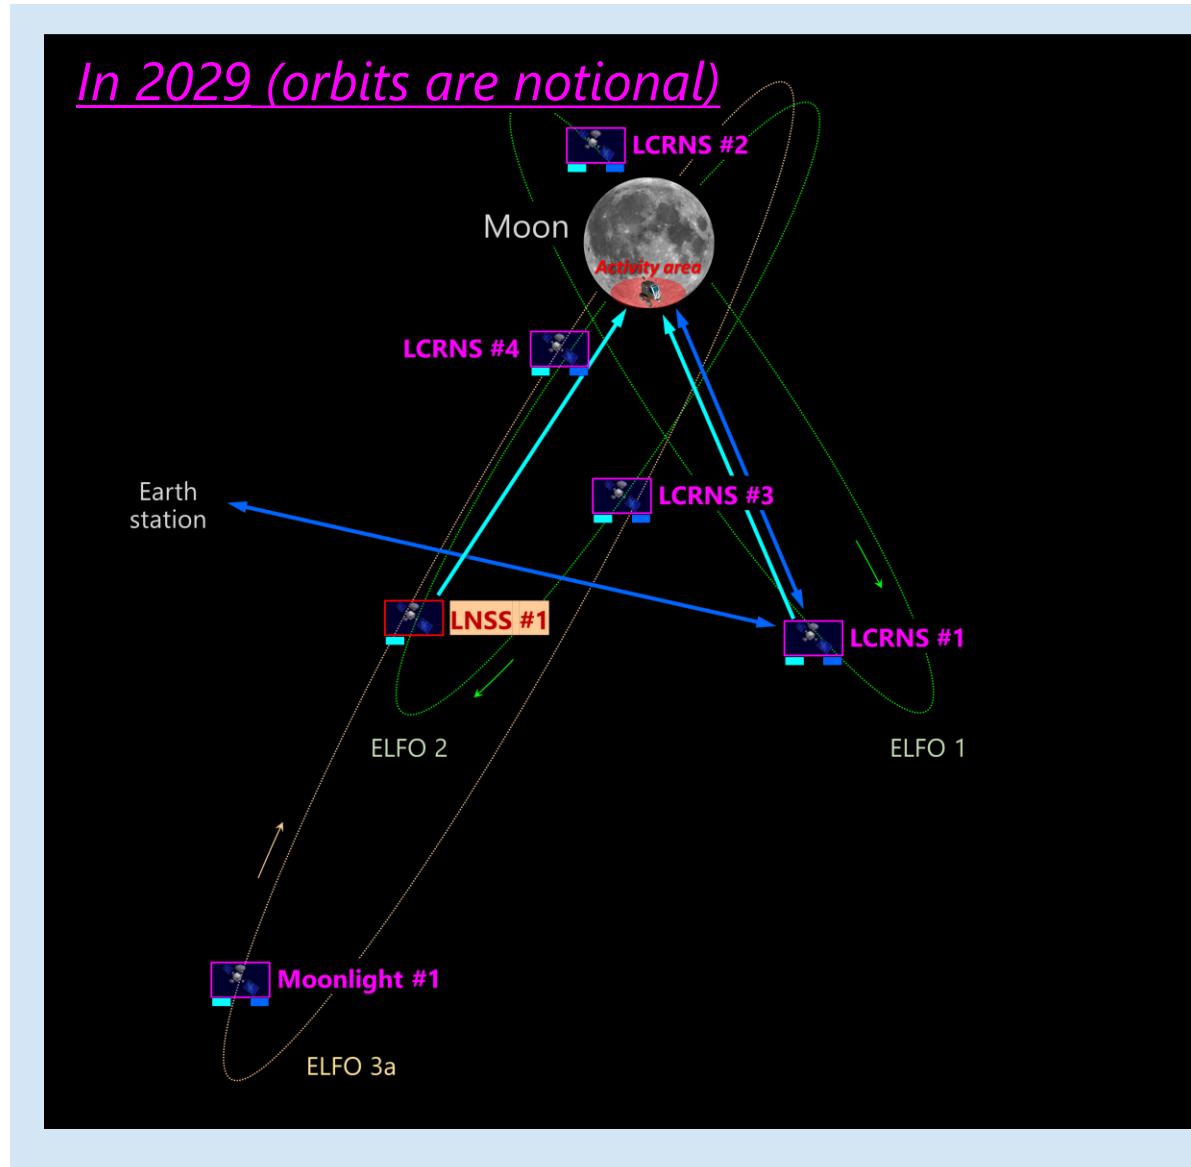

Acquisition of the LANS AFSs, LANS receivers' PNT solutions, and GNSS weak signals

Calculation of the precise satellite orbits and clocks, precise receiver positions and clocks

SISE evaluation

1. Compare the LANS satellite ephemerides with the ground-truth LANS satellite orbits and clocks
2. Compare the LANS pseudo ranges with the ground-truth ones to identify unknown error sources (satellite hardware and Moon environment delays)

PNT accuracy evaluation

1. The LANS receiver at the lunar South Pole region calculates its PNT solutions
2. Compare the receiver's PNT solutions with the ground-truth receiver position and clock

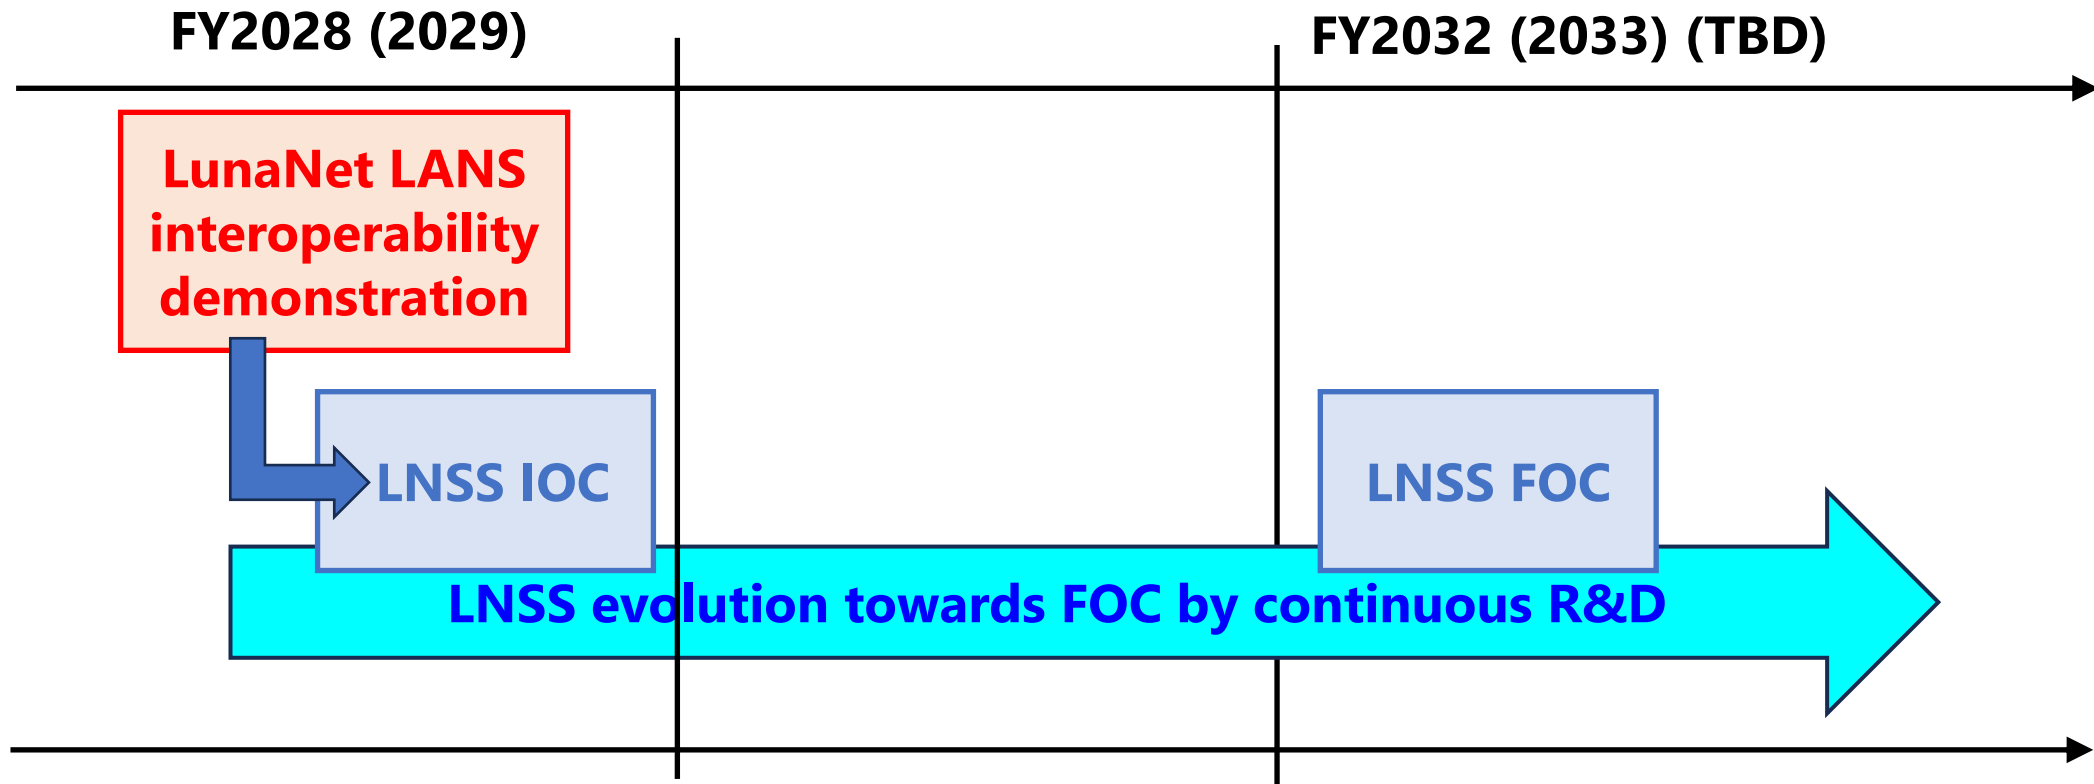

✂ The PNT solutions can be the combined solution with the Digital Elevation Map (DEM)

LANs interoperability and PNT demonstration – concept of operation

□ Three major steps for the demonstration

1. Acquisition of mission data (AFSSs, LANs receivers' PNT solutions, GNSS weak signals) in Moon environment
2. Calculation of ground-truth data (precise LANs satellite orbits and clocks, precise LANs receiver positions and clocks) by Earth stations
3. Evaluation of SISEs for LANs satellites and LANs PNT accuracy by comparing the acquired mission data with the calculated ground-truth data

- **Our feasibility study (FS) towards the LNSS FOC is currently ongoing**
 - **LNSS SISE enhancement** by using GNSS precise measurements and etc.
 - **LNSS augmentation** by using moon surface assets such as surface beacons
 - **LANS receiver PNT algorithm** (combined navigation algorithm with DEM)
 - **Service region expansion** (satellite constellation design for entire moon surface)

Takeaways on Japan Lunar PNT

- ❑ The LNSS first satellite launch expected in 2028/2029 to do the LANS interoperability and PNT accuracy demonstration with ESA and NASA
- ❑ Our feasibility study towards the LNSS FOC is ongoing, aiming for continuous accuracy enhancement and service region expansion (entire moon surface)
- ❑ We continue working with our international partners to realize lunar PNT system of systems

New working group on lunar PNT (WG-L) established at ICG last year!
